

Yogesh Ingavale

Cloud & DevOps Engineer

Mumbai, India - +91 7020914027 – ingavaleyogesh2@gmail.com - LinkedIn - GitHub - Portfolio website

Professional Summary

Cloud and DevOps Engineer with hands-on experience in CI/CD pipeline implementation, infrastructure automation, and cloud application deployment. Skilled in Infrastructure as Code (Terraform), cloud infrastructure, containerization, orchestration, monitoring, and DevSecOps practices. Strong foundation in Linux, networking, and cloud architecture, with a focus on automation, scalability, reliability, and secure application delivery.

Skills

Cloud: AWS, Microsoft Azure, GCP

AWS Services: EC2, S3, IAM, VPC, RDS, EKS, Route 53, CloudWatch, Lambda, SNS

Linux: Troubleshooting, File Systems, Package Management, Boot Process, User Management

CI/CD: Jenkins, GitHub Actions

Containers: Docker, Kubernetes, Helm

Infrastructure as Code: Terraform, AWS CloudFormation

Configuration Management: Ansible

Monitoring: Prometheus, Grafana, AWS

CloudWatch **DevSecOps:** SonarQube, Trivy, AWS

IAM Version Control: Git, GitHub

Scripting & Programming: Bash, Python

Networking: Load Balancing, DNS, HTTP/HTTPS, TCP/IP

Experience

Cloud & DevOps Trainee

clouddevopshub.

Dec 2025 – Jun 2026

- Completed hands-on training in Linux, AWS, Networking, Git, GitHub, Jenkins, Docker, Kubernetes, Terraform, Ansible, Python, Bash, Prometheus, and Grafana.
- Built CI/CD pipelines using Jenkins, Git, and Docker to automate application build and deployment workflows.
- Provisioned and managed AWS infrastructure using Terraform and implemented configuration management with Ansible.
- Deployed containerized applications on Kubernetes and implemented monitoring using Prometheus, Grafana, and AWS CloudWatch.
- Completed multiple end-to-end Cloud & DevOps projects, applying Infrastructure as Code (IaC), containerization, automation, and monitoring best practices.

Projects

3-Tier Application on AWS using Terraform

- Provisioned a 3-tier AWS cloud architecture using Terraform, automating infrastructure deployment for EC2 instances, Application Load Balancer, and RDS database.
- Designed secure networking using Amazon VPC, public/private subnets, route tables, and Internet Gateway to isolate web, application, and database layers.
- Configured Application Load Balancer and Auto Scaling groups to distribute traffic across multiple EC2 instances for high availability.
- Deployed Amazon RDS with Multi-AZ configuration to ensure database reliability and automated failover.
- Implemented Infrastructure as Code (IaC) workflows using Terraform (init, plan, apply) to enable repeatable and consistent cloud infrastructure provisioning.

CI/CD pipeline for Starbucks Clone Application

- Designed and implemented a CI/CD pipeline using Jenkins and GitHub to automate application build, testing, and deployment workflows.
- Integrated GitHub webhooks with Jenkins pipelines to trigger automated builds on every code commit.
- Containerized the application using Docker and automated Docker images creation within Jenkins pipeline stages.
- Configured automated Docker image tagging and pushing to Docker Hub for version-controlled container images.
- Deployed Docker containers to AWS EC2 instances, enabling automated application deployment and consistent runtime environments.

Education

Bachelor of Technology (B.Tech) – Computer Science & Engineering

Sanjeevan Group of institution, Panhala, Maharashtra

2023 – 2026

Diploma in Computer Science and Engineering

Tatyasaheb Kore Institute of Engineering & Technology (polytechnic), warananagar, Maharashtra

2020 –2023

Certifications

- DevOps with AWS Certification – Cloudevopshub
