

Yogesh Ingavale

Junior Cloud & DevOps Engineer

Mumbai, India - +91 7020914027 – ingavaleyogesh2@gmail.com - LinkedIn - GitHub - Portfolio

Professional Summary

Cloud and DevOps Engineer with hands-on experience in CI/CD pipeline implementation, infrastructure automation, and cloud application deployment. Skilled in Infrastructure as Code (Terraform), cloud infrastructure, containerization, orchestration, monitoring, and DevSecOps practices. Strong foundation in Linux, networking, and cloud architecture, with a focus on automation, scalability, reliability, and secure application delivery.

Skills

Cloud Platform: AWS (Amazon Web Services), GCP (Google Cloud Platform)

AWS Services: EC2, VPC, S3, EKS, ECR, RDS, SNS, LAMBDA, ROUTE 53, IAM

Containers & Orchestration: Docker, Kubernetes

Infrastructure as Code (IaC): Terraform

CI/CD & GitOps: Jenkins, GitHub Actions

Configuration Management: Ansible

DevSecOps: SonarQube, Trivy, OWASP

Monitoring & Observability: Prometheus, Grafana, CloudWatch

Version Control: Git, GitHub

Scripting & Programming: Bash, Python

Networking: TCP/IP, DNS, HTTP, HTTPS, Load Balancing

Linux: User management, File systems, Process Management, Boot Process, Troubleshooting

Projects

Cloud-Native 3-Tier Application Deployment on Amazon EKS (AWS)

- Designed and deployed a cloud-native 3-tier application on Amazon EKS using Docker, Kubernetes, ECR, and ALB Ingress.
- Orchestrated .NET Frontend, Python Backend, and MongoDB using Kubernetes Deployments, Services, Ingress, Secrets, and Persistent Volume Claims (PVCs).
- Configured AWS IAM Roles, EKS Managed Node Groups, and AWS Load Balancer Controller to securely expose the application via an internet-facing Application Load Balancer (ALB).
- Implemented Prometheus and Grafana using Helm for real-time monitoring of Kubernetes workloads, cluster health, and application performance.
- Optimized Kubernetes networking and service communication by configuring Ingress, ClusterIP Services, Secrets, and Persistent Volume Claims (PVCs) for reliable application connectivity.

Highly Available & Scalable Three-Tier Infrastructure on AWS using Terraform

- Automated a production-ready AWS three-tier infrastructure using Terraform Modules, reducing infrastructure provisioning time by 90%+ through Infrastructure as Code (IaC).
- Designed a highly available Multi-AZ architecture with automated load balancing, fault tolerance, and scalable infrastructure for production workloads.
- Developed modular and reusable Terraform code, accelerating environment provisioning and simplifying infrastructure management and maintenance.
- Implemented a **secure cloud architecture** with network isolation, IAM least-privilege access, and AWS security best practices for reliable deployments.
- Delivered automated, scalable, and repeatable cloud infrastructure, improving deployment consistency, operational efficiency, and infrastructure reliability.

Cloud-Native DevSecOps CI/CD Platform on Amazon EKS

- Designed and deployed a cloud-native three-tier application on Amazon EKS using Infrastructure as Code (IaC).
- Built an end-to-end CI/CD pipeline to automate application build, security checks, and Kubernetes deployment.
- Implemented GitOps for automated and version-controlled application deployments.
- Integrated DevSecOps by performing code, dependency, and container vulnerability scanning before deployment.
- Enabled monitoring and observability with real-time metrics and dashboards for Kubernetes workloads.

Education

Bachelor of Technology (B.Tech) – Computer Science & Engineering

Sanjeevan Group of Institution, Panhala

2023 – 2026

Diploma in Computer Science and Engineering

TKIET(P), Warananagar

2020 – 2023

Certifications

-
- Cloud and DevOps Certificate - clouddevopshub
 - Ansible and Terraform Certificate - clouddevopshub
