PROFILE SUMMARY

Cloud and DevOps Engineering enthusiast with hands-on experience in **CI/CD pipeline implementation, infrastructure automation, and cloud based application deployment**. Skilled in building **scalable and highly available cloud infrastructure**, implementing **Infrastructure as Code (IaC)**, and developing **automated deployment workflows** to support continuous integration and continuous delivery practices.

Experienced in **containerization, orchestration, monitoring, and DevSecOps integration** to enhance application reliability, security, and performance. Strong foundation in **Linux systems, networking concepts, and cloud architecture**, with a focus on **automation, system reliability, and cloud native development**.

EDUCATION

Sanjeevan Group of institution

Panhala, Maharashtra

B.Tech - Computer Science and Engineering

2023-2026

Tatyasaheb Kore Institute of Engineering & Technology (polytechnic)

Warananagar, Maharashtra

Diploma in Computer Science and Engineering

2020-2023

SKILLS

Linux: Troubleshooting, File Systems, Package Management, Boot Process

Scripting & Programming: Python, Bash

Cloud Platforms: AWS, Google Cloud Platform(GCP), Microsoft Azure

Networking: VPC, Load Balancing, DNS, TCP/IP

Containers & Orchestration: Docker, Kubernetes (EKS,GKE)

Infrastructure as Code (IaC): Terraform, Ansible

CI/CD & Version Control: Git, GitHub, GitHub Actions, Jenkins, CI/CD

Monitoring & Logging: Prometheus, Grafana, CloudWatch

DevSecOps: Trivy, SonarQube

Database: AWS RDS

AI Interest Areas: Cloud based AI tools and automation integration

EXPERIENCE

CloudDevOpsHub

Indore, India

Cloud - DevOps Intern

Dec 2025 - present

- Implemented **multi-cloud infrastructure across AWS, Azure, and Google Cloud Platform (GCP)** using **Infrastructure as Code (IaC) with Terraform and Kubernetes orchestration** to support automated and scalable cloud deployments.
- Designed and managed **Infrastructure as Code workflows** using **Terraform** to provision and maintain consistent **cloud infrastructure across development and production environments**.
- Built and maintained **CI/CD pipelines** using **Jenkins, GitHub, and Docker** to automate application build, testing, and deployment processes as part of a **continuous integration and continuous delivery workflows**.
- Integrated **DevSecOps practices** by implementing **container vulnerability scanning with Trivy** within CI/CD pipelines to enhance application security and secure software delivery.
- Managed **source code version control and collaborative development workflows** using **Git and GitHub**, supporting structured code managed and continuous development practices.

PROJECTS

3-Tier Application on AWS using Terraform

- Provisioned a **3-tier AWS cloud architecture using Terraform**, automating infrastructure deployment for EC2 instances, Application Load Balancer, and RDS database.

- Designed secure networking using **Amazon VPC, public/private subnets, route tables, and Internet Gateway** to isolate web, application, and database layers.
- Configured **Application Load Balancer and Auto Scaling groups** to distribute traffic across multiple EC2 instances for high availability.
- Deployed **Amazon RDS with Multi-AZ configuration** to ensure database reliability and automated failover.
- Implemented **Infrastructure as Code (IaC) workflows using Terraform (init, plan, apply)** to enable repeatable and consistent cloud infrastructure provisioning.

CI/CD pipeline for Starbucks Clone Application

- Designed and implemented a **CI/CD pipeline using Jenkins and GitHub** to automate application build, testing, and deployment workflows.
- Integrated **GitHub webhooks with Jenkins pipelines** to trigger automated builds on every code commit.
- Containerized the application using **Docker** and automated Docker images creation within Jenkins pipeline stages.
- Configured automated **Docker image tagging and pushing to Docker Hub** for version-controlled container images.
- Deployed Docker containers to **AWS EC2 instances**, enabling automated application deployment and consistent runtime environments.

ACHIEVEMENTS

- **Completed** a Cloud-DevOps internship with hands-on work in IaC, CI/CD automation, and multi-cloud deployments, reducing provisioning and deployment time
